

SARVESH SHARMA

+91 9146324098 | Nagpur, Maharashtra | worksarvesh05@gmail.com | github.com/Worksarvesh

OBJECTIVE

Final-year B.Tech IT student passionate about building fast, beautiful, and responsive web interfaces. Experienced in React, JavaScript, and modern CSS — with hands-on projects spanning real-time dashboards and interactive portfolio systems. Seeking a Junior Frontend Developer role to contribute to production-grade web products.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), React.js, TypeScript (basic), Flexbox, CSS Grid, CSS Animations, Responsive Design

React: Functional Components, Props, useState, useEffect, useRef, React Router, Custom Hooks, Component Architecture

Data & Charts: Recharts, D3.js (basic), WebSockets, REST APIs, JSON data handling

Styling: Custom CSS, CSS Variables, Keyframe Animations, Glassmorphism, Dark/Light Theming, Media Queries

Tools: Git, GitHub, GitHub Pages, Vite, VS Code, Chrome DevTools, Postman, Figma (basic)

Core CS: DSA, OOP, DBMS, Operating Systems, Computer Networks

PROJECTS

DevPulse — Real-Time Engineering Team Dashboard | *React.js, TypeScript, Node.js, WebSockets, Recharts, GitHub API*

- Built a real-time internal ops dashboard for engineering managers aggregating GitHub PR status, open issues, and CI/CD pipeline health per team member into a single live view.
- Implemented WebSocket connection for live data updates — dashboard refreshes PR and build status in real time without page reload.
- Developed interactive sprint velocity charts and deployment frequency graphs using Recharts with custom tooltips, legends, and responsive containers.
- Built role-based views (manager vs developer) with conditional rendering — each role sees a different data layout and permission level.
- Designed a dual dark/light enterprise theme using CSS variables with full WCAG AA accessibility compliance — keyboard navigable, proper ARIA labels, and sufficient color contrast.
- Deployed live on GitHub Pages with mock GitHub API and Jira data — fully demonstrable without real credentials.

Worksarvesh — Personal Developer Portfolio Website | *React.js, CSS3, JavaScript, Intersection Observer API*

- Designed and built a senior-level personal portfolio with cursor glow effect, scroll progress bar, and staggered section reveal animations using Intersection Observer API.
- Implemented a typing animation cycling through frontend roles and a morphing CSS blob with orbital ring animation in the hero section.
- Built a skill chip grid with staggered entrance animations and project cards with perspective tilt effect driven by JS mousemove events.
- Added email copy-to-clipboard with animated toast notification and a fixed back-to-top button with scroll-triggered visibility.
- Deployed live on GitHub Pages: worksarvesh.github.io

EDUCATION

Shri Ramdeobaba College of Engineering and Management, Nagpur
B.Tech in Information Technology
